Singly linked list

Saurabh Shukla (MySirG)

# Agenda

- ① what is a list?
- ② what is a node
- ③ Singly linked list
- ④ SLL ADT
- ⑤ Array vs Dynamic Array vs SLL

# What is a list?

List is a linear collection of data items  
also known as List Item

## Example 1

Marks of tests / List of marks

20, 25, 31, 28, 40, 35, 50, 42, ...

List Item  $\rightarrow$  int

## Example 2

List of guests

"Gupta", "Dubey", "Ahuja", "Raikwar", "Khan"...

List Item  $\rightarrow$  char array  
or  
string

## Example 3 List of Students

101	102	103	104	
"Rahul"	"Deepthi"	"Ravi"	"Suraj"	...
16	17	16	18	

List Item  $\rightarrow$  Student

# What is a node?

`int *p1, *p2`

~~`int item;`~~

`p1 = new int;`

~~`node`~~  
~~`int *start`~~

`struct node`

`{`

`int item;`

`node *next;`

`};`

Singly Linked List

# Singly Linked List

class SLL

{

node \*start;

}

## Insertion

- ① at the beginning of list
- ② as a last node
- ③ after a node

## Deletion

- ① first node
- ② second node
- ③ particular node

# SLL ADT

class SLL

{

Constructor  
Copy constructor  
Copy assignment operator  
insertAtStart()  
insertAtLast()  
insertAfterX()  
deleteFirst()  
deleteLast()  
deleteNode()  
edit()  
search()  
count()  
Destructor

};

# Array vs Dynamic Array vs SLL

H.W
